## 1. COMPONENTS LIST AND CONNECTION BLOCK DIAGRAM w/ PINS

Atmel Studio 7.0

- Simulator
- Debugger
- Atmega328PB-Xmini
- multi-function shield
- DC Motor
- Stepper Motor
- Servo Motor

### ATMEGA328

Port Pin DC motor

#### ATMEGA328

Port Pin Stepper motor

```
(PCINT14/RESET) PC6 □ 1
                                   28 PC5 (ADC5/SCL/PCINT13)
      (PCINT16/RXD) PD0 ☐ 2
                                   27 PC4 (ADC4/SDA/PCINT12)
       (PCINT17/TXD) PD1 ☐ 3
                                   26 PC3 (ADC3/PCINT11)
      (PCINT18/INT0) PD2 ☐ 4
                                   25 PC2 (ADC2/PCINT10)
                                   24 PC1 (ADC1/PCINT9)
 (PCINT19/OC2B/INT1) PD3 5

```

# 2. INITIAL/MODIFIED/DEVELOPED CODE OF TASK 1/A

```
C Code for Task DC
void ADC_Init();
int ADC Read(char);
/***********************************
int main(void)
                                                      /* Make INT0 pin as Input */
DDRD &= \sim(1<<PD2);
PORTD |= (1 << PD2); // turn On the Pull-up
                                                /* Make OC0 pin as Output */
DDRD = (1 << PD6);
EICRA |= (1 << ISC01); // set INT0 to trigger to falling edge
EIMSK = (1 \ll INT0); // Turns on INT0
sei(); /*enable interrupt*/
ADC_Init(); /*calls the ADC_int function*/
TCNT0 = 0;
                                                      /* Set timer0 count zero */
```

```
C Code for Task Stepper
int main(void)
                                                           /* Initialize ADC */
ADC_Init();
                                              /* Make PORTD lower pins as output */
DDRD = 0x0F;
PORTC = (1 << 0);
                         //set my ADC port
DDRB = (1 << 1);
                                       //set PORTB1
ICR1 = 4999;
                   //set as TOP
TCCR1A |= (1<<COM1A1) | (1<<COM1B1);//set CTC mode
TCCR1A = (1 << WGM11);//set CTC mode
TCCR1B |= (1<<WGM12) | (1<<WGM13);//set CTC mode
TCCR1B = (1 << CS10) | (1 << CS11); // set prescaler to 64
while(1)
ADC_Read(0);//calls the ADC read
_delay_ms(50);//wait
PORTD = 0x66;
_delay_ms(50);
PORTD = 0xCC;
_delay_ms(50);
PORTD = 0x99;
```

```
_delay_ms(50);
PORTD = 0x33;
_delay_ms(50);

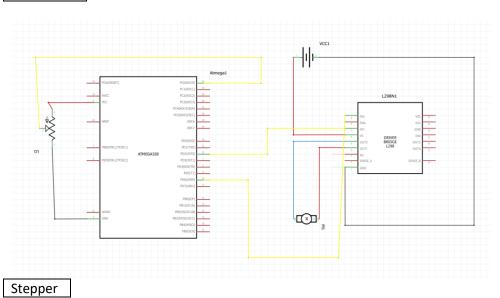

//depending of the potentiometer adc conversion it set another delay if((adc_value >= 973) && (adc_value < 1024)){
    _delay_ms(10);
} else if((adc_value < 972) && (adc_value >= 768)){
    _delay_ms(10);
} else if((adc_value < 767) && (adc_value >= 51)){
    _delay_ms(10);
} else {

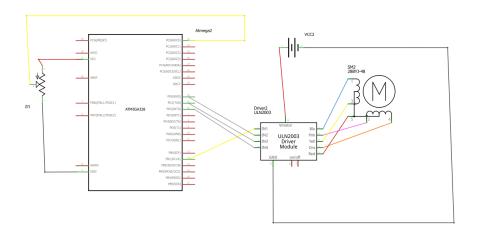

PORTD = 0x00;
    _delay_ms(10);
} return 0;
}
```
